

ABHISHEK BHATIA

Full Stack Developer | Python, React & Backend Systems

abhishekbhatia9560@gmail.com | [GitHub](#) | [LinkedIn](#)

SUMMARY

Full-stack Software Engineer with 1.5+ years of experience building Python (Flask) backends, REST APIs, and React-based frontends. Experienced developing and deploying machine learning-integrated web applications, working with relational and NoSQL databases (MySQL, MongoDB), and collaborating cross-functionally with product and frontend teams to ship production features.

EXPERIENCE

Software Engineer (Promoted from AI Intern) | Novoinvent Software Pvt Ltd 02/2025 - Present

- Wrote and optimized SQL queries to extract and analyze production data, identifying usage trends and patterns that informed feature and product decisions, in close collaboration with cross-functional frontend and product teams — improving query performance by 25%.
- Used Python (Pandas, NumPy, Matplotlib, Seaborn, Plotly) for data cleaning, exploratory analysis, and visualization to support internal reporting and technical decision-making.
- Built and deployed Flask backends and production-ready REST API endpoints, integrating FAISS and Pinecone vector databases and increasing data retrieval speed by 40%.
- Structured backend services for reliable frontend and file-storage integration, supporting AI chatbots and voice agents serving 500+ users daily.
- Promoted from AI Intern to full-time Software Engineer within the same team based on strong performance, taking on broader backend and data ownership.
- Developed MCP server plugins to automate developer-tooling workflows in VS Code and Cursor, improving process efficiency by 40% across five plugins.

PROJECTS

Baby Birth Weight Prediction App — Flask, Python, scikit-learn, REST API

- Built a machine learning web app that predicts a newborn's birth weight using a trained regression model, served through a Flask backend with REST endpoints (tested via Postman).
- Trained and integrated the prediction model (model_training.ipynb → model.pkl) into a Flask API for real-time inference, with a server-rendered Jinja UI for input and results.

Weather App — React.js, REST API Integration

- Built a React-based weather application that fetches and displays real-time weather data by city using a public weather API.
- Implemented component-based UI architecture and asynchronous API data handling in React.

Wanderlust — JavaScript, Full-Stack Web Development

- Developed a full-stack web application covering both client-side interactivity and server-side logic.

AI Chatbot — Novoinvent Software Pvt Ltd (Internship Project) — Flask, REST APIs, FAISS, Pinecone

- Built a full application stack — Flask backend, API layer, and integration points for frontend applications — for a production data-retrieval system.
- Integrated FAISS/Pinecone vector databases for semantic search and retrieval, optimizing query and data-access performance.

SKILLS

Languages: JavaScript, Python, SQL, PHP

Frontend: React.js, HTML, CSS, Bootstrap

Backend & Frameworks: Flask (Python), Node.js, Express, Laravel (PHP), REST APIs

Databases: MySQL, MongoDB

Data Analysis & Reporting: Pandas, NumPy, Matplotlib

Tools & Platforms: Git, Docker

EDUCATION

B.Tech, Computer Science — AI & ML

RD Engineering College / AKTU, Ghaziabad | CGPA: 7.34 / 10.00 | 2022 - 2026
